

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Guidance Principles on
Clean Power Plan Modeling

Docket No. AD16-14-000

ERRATA NOTICE

(January 20, 2016)

On January 19, 2016, the Commission issued a staff white paper on Guidance Principles for Clean Power Plan Modeling. This errata notice serves to correct the omission of certain text in the paper as issued, and to make other corrections, as follows:

1. The third paragraph should be revised to include new text after the first sentence, so that the paragraph states as follows:

This white paper identifies four guiding principles that may assist transmission planning entities, which may include regional transmission organizations (RTOs), independent system operators (ISOs), electric utilities, or other interested stakeholders, in conducting effective analysis of the CPP and associated state plans, federal plans or multi-state plans (compliance plans). The North American Electric Reliability Corporation (NERC) and the regional electric reliability organizations may also benefit from following these guiding principles as they perform CPP-related analyses. These guiding principles address four areas: (1) transparency and stakeholder engagement; (2) study methodology and interactions between studies; (3) study inputs, sensitivities and probabilistic analysis; and (4) tools and techniques.

2. The citation in footnote 1 should be revised as follows:

¹ *See Carbon Pollution Emission Guidelines for Existing Stationary Sources: Electric Utility Generating Units, 80 Fed. Reg. 64,662* ~~Docket No. EPA-HQ-OAR-2013-0602, at 1104~~(2015) (CPP).

3. The citation in footnote 3 should read “*Id.* at 64,671.”
4. The citation in footnote 6 should read “CPP at 64,671.”
5. A new footnote 10 should be added to the end of the second sentence under heading III. Purpose of White Paper, with the following text: “We note, however,

that the EPA has determined that Vermont is not required to submit a compliance plan.”

For ease of reference, a clean, revised copy of the white paper is also being filed in the above-captioned docket.
